

ANALYSIS:

From the given data which was analyzed the following are the insights which were gathered-

From the analyses we inferred that the south Indian states like Andhra Pradesh, Tamil Nadu, Karnataka are great contributors of GDP in India not only great but consistent also so more and more focus is required on states like m.p. and Chattisgarh, Mizoram etc.

Also if we approach GDP sector wise(primary , secondary, tertiary) it can be inferred that tertiary sectors in each state has contributed the most ,hence there is a need to increase it The main source of GDP in is from agriculture ,crops and more .The sub sectors which can be profitable to us are finance, transport, real estate .

Education also played a vital role in GDP per capita as we observed that when primary education sector had least no. of drop outs had the highest GDP rates, there was correlation observed, hence primary education all increases growth in GDP.

Population did not show any particular pattern but less population caused less drop rates which can further increase GDP. The hypothesis that can be generated from this data is if primary education is given more focus and investment it can increase the GDP
